

Come by Booth Number B24002 to discuss clean water storage solutions!

The poultry industry requires a consistent, clean water supply. The water supply that poultry relies on needs to be free of contamination by microbes, which could cause disease in poultry or lead to food safety issues. Commercial poultry farmers rely on Pioneer Water Tanks to keep poultry healthy and happy.

Rainwater Equipment supplied this 30,000-gallon capacity Pioneer Water Tank for a poultry farm in North Carolina. The farm stores well water above ground for a consistent supply. The AQUALINER® Fresh tank liner stores water within the Pioneer Water Tank for a clean, fresh water supply.

Pioneer Water Tanks' AQUALINER® Fresh is the only antimicrobial tank liner in the world. Sanitized® antimicrobial technology is embedded into the water-facing layer to protect water tanks from bacteria, mold, and mildew growth. The five-layer AQUALINER® Fresh tank liner is BPA-free and NSF-61 certified for drinking water storage.

NSF-61 Certification Link:

Rainwater Equipment LLC specified an XLE 40/02 Pioneer Water Tank with a snow load kit for a poultry farm in West Virginia. The combination of engineered internal and external support columns and truss bracing increases the snow load capacity of the tank to 20 psf. The poultry farm utilizes the Pioneer Water Tank for domestic water needs. Tank Builders provided the installation, anchoring the tank to a concrete pad.

Pioneer Water Tanks store water within the AQUALINER® Fresh tank liner, protected within the ZINCALUME® steel tank body. The Pioneer V-LOCK® wall profile provides superior internal support for the tank liner. The Pioneer V-LOCK® tank profile maintains the strength of corrugated ZINCALUME® steel and supports the liner attached at multiple fixed points. As the liner is pressing up against the flatter sections, the Pioneer V-LOCK® support stops the liner from flexing and stretching to the same degree.

Designed for harsh and demanding conditions, Pioneer Water Tanks have supplied top-tier water solutions since 1988. Pioneer Water Tanks manufacturing utilizes strong and durable ZINCALUME® or COLORBOND® steel. Our standard in-stock range of tanks is available from 5,000 to 1,000,000 gallons or can be custom-built up to one million gallons. We offer a full range of accessories and fittings so that your tank meets your needs and performs to the highest standards. Pioneer Water Tanks are configurable with antivortex fire options to provide water in case of emergencies.

Rainwater Equipment is an Authorized Dealer of Pioneer Water Tanks and many more premium products. Rainwater Equipment is a nationwide supplier of filters, water pumps, water treatment products (such as UV Systems and Ozone Generators), and more. Rainwater Equipment offers over-the-phone product selection assistance for your specific project, competitive pricing, and fast shipping. Rainwater Equipment provides quotes for larger projects for well water storage, fire protection, and rainwater harvesting systems.
