

FOR IMMEDIATE RELEASE

Discflo Pumps Returns to IPPE 2025: Showcasing Advanced Pumping Solutions for the Animal Agriculture Industry

San Diego, CA (December 10, 2024) — [Discflo Pumps](#) will once again exhibit at the [International Production & Processing Expo](#), the world's largest annual event for the poultry, egg, meat, and animal food industries, in Atlanta, Georgia January 28-30, 2025. They will be showcasing their cutting-edge pumps and how they tackle unique industry challenges with unmatched efficiency, durability, and reliability.

"The food processing industry faces distinct challenges, and Discflo is dedicated to providing superior pumping solutions to address them," says Nick Ruiz, VP of Business Development at Discflo. *"Our gentle, non-impingement technology preserves the integrity of delicate products like eggs and poultry. We ensure top sanitary standards with 3A/USDA-compliant, CIP and SIP-ready pumps. Plus, by minimizing maintenance needs by 90% or more, we help our clients maximize uptime, efficiency, and profitability."*

Discflo offers a range of specialized pumps tailored specifically for the food processing industry, and are manufactured in America at their headquarters in California. Their sanitary food-grade SP and MIS Series pumps effortlessly handle shear-sensitive egg whites, abrasive sugar crystals, and thick syrups while maintaining product integrity.

For fluid transfer applications, Discflo pumps smoothly manage challenging slurries and sauces without clogging, corrosion, or causing product damage. Additionally, their food processing pumps are ideal for handling raw meat mixtures, dairy products, and processed food, effectively managing high solids and viscous materials while preserving product quality.

"Discflo's unique disc pump technology sets us apart from traditional centrifugal and positive displacement pumps," says Xochitl Ruiz, President and CEO of Discflo. *"Our Discpac technology leverages boundary layer and viscous drag principles, providing superior abrasion resistance to minimize wear in tough applications. With smooth, laminar flow, we prevent clogging and reduce product loss, while our non-impingement handling protects fragile products from damage. Discflo is all about delivering performance and reliability where others fall short."*

For over 40 years, Discflo Pumps has been a global leader in engineering solutions for the toughest fluid handling challenges. Their pumps have earned a worldwide reputation for reliability and longevity in industries including food & beverage, mining, oil & gas, wastewater, and more.

They'll be exhibiting at booth [C18196](#) at IPPE 2025, and will be holding live demonstrations explaining how their solutions boost efficiency, reduce downtime, and enhance product quality.

About Discflo Pumps

Discflo Pumps has been at the forefront of global industrial pump technology since 1982, offering proven solutions that excel in the most challenging environments. They consistently

outperform traditional pumps like centrifugal, lobe, and progressive cavity models in industries ranging from food processing and wastewater treatment to petrochemical, pharmaceuticals, and chemical processing. For more information, visit www.discflo.com or contact sales@discflo.com.
