## **Announcement: Reovotec and BG Makina Form Global Alliance to Better Provide the Egg Packaging and Grading Industry**

We are excited to announce a new global alliance between Reovotec and BG Makina, a partnership dedicated to revolutionizing egg packaging and grading through the development of simple, reliable, and innovative machinery. By uniting our expertise, we will manufacture, sell, and service our equipment from our two factory facilities in Izmir, Turkey, and Guadalajara, Mexico, complemented by parts, sales, and service support from our office in Weston, Florida. Our service technicians will also be strategically based across the Americas, Europe, and the Middle East to provide unparalleled support.

Reovotec and BG Makina's machines are designed with customer value in mind—focusing on modularity, simplicity, reliability, and cost-effectiveness with all the options and offerings of similar machines in the industry. Our designs minimize both initial investment and operational costs, while intuitive features make daily cleaning, lubrication, and maintenance simple and straightforward.

“Our machines are designed to give you the best return on investment due to their simplicity and intuitive operation,” shared Andres Moreno, Director at Reovotec. “By avoiding excess use of unique molded plastic parts and specialized electronics, which often lead to high spare costs, we’ve ensured that a large percentage of our components are standard and readily available in the market without compromising quality or functionality”

With this thoughtful approach to accessible, market-standard parts, customers benefit from lower maintenance costs, independence, efficient servicing, and long-term value. BG Makina's Engineer Director added, “Combining our technical expertise with Reovotec's quality commitment, we're positioned to deliver reliable and accessible solutions to egg producers around the world. Our facilities in the USA, Turkey and Mexico allow us to respond quickly and offer exceptional support.”

We look forward to setting new industry standards and making high-quality egg packaging and grading equipment more accessible to egg producers globally.
