

## **INBERG: Devotion in Mycotoxin Management**

**Inberg, a global producer of mycotoxin binders and innovative feed additive solutions, is excited to announce its participation in the International Production & Processing Expo (IPPE) 2025. The event will take place from January 28 to 30, 2025, at the Georgia World Congress Center in Atlanta, Georgia.**

INBERG has distinguished itself in the fight against mycotoxins through its innovative product line. The company's approach to mycotoxin management is grounded in a deep understanding of the biological mechanisms behind mycotoxin production and contamination. Utilizing this expertise, INBERG has created a series of mycotoxin binders known as MycoStop, which are both effective and safe for use in animal feed. The products in the MycoStop range employ effective strategies to neutralize mycotoxins in the gastrointestinal tract of animals. They bind to mycotoxins, preventing their absorption into the bloodstream, and ensuring their safe excretion from the body. Supported by bioactive ingredients and herbal extracts, these products also strengthen the immune system, detoxify the liver, and reduce oxidative stress. INBERG's commitment to innovation and research is evident in the continuous improvement of their products. The company's R&D team is dedicated to exploring new ways to enhance the efficacy of their mycotoxin binders, incorporating the latest scientific findings and technological advancements. This dedication ensures that INBERG's products remain at the cutting edge of mycotoxin management, providing farmers with the tools they need to protect their animals.

“Inberg’s commitment to innovation and sustainability is what sets us apart as a global partner in animal nutrition,” said Mr. Zloh, CEO of Inberg. “We’re proud to produce and distribute mycotoxin binders that make a tangible difference in feed quality and animal performance. IPPE 2025 provides the perfect platform to connect with our partners and showcase our expertise.”
